Printing from LR to your local printer. Black and White

Two Ways to Print B&W Print Using Special B&W Modes

- Special printer B&W mode should create neutral prints
 - Usually available in printers with 3 black inks
 - Forces black inks to be used. Smoothes tonal variations and increases permanency.
 - May use color inks to create neutral black depending on paper • Monochrome images may be toned with a single color using color
 - inks.
- If your printer has a B&W mode, try using it
 - Choose paper type, quality setting and appropriate ink.
 - For third party papers, try using settings the manufacturer provides with the color profile.
 - Choose B&W printing mode
 - Go to color controls to adjust tonality, tint, contrast and brightness Choose either image processing software or printer to control color.

Ways to Print B&W Print as a Color Image

- Convert image to B&W in post
- If your printer does not have B&W mode, print as you would any color image.
- Use ICC color profile based management
 - Printer tries to print neutral image
 - Most color profiles are not optimized for neutral gray
 - May have color cast that may need to be removed
 - Color cast may be paper dependent

B&W Print Color Casts

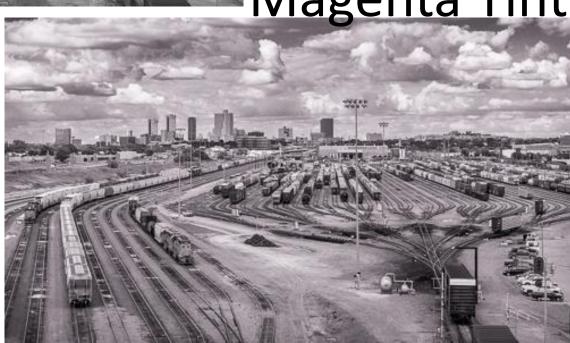

Blue Tint 7% Sat

Neutral

Green Tint 5%

Yellow Tint 7% Sat

Magenta Tint 5% Sat

Sizing Image for Lab

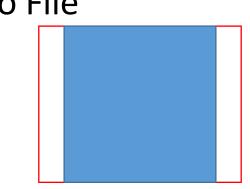

- Use lab recommendations when setting image resolution
- Many commercial labs will size images to fill the frame

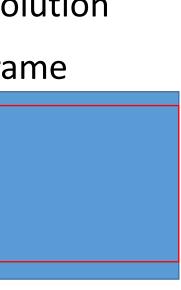

• Use LR or PS to crop your image to the aspect ratio of the final Lab print so you can control crop and fill frame.

- You can size canvas to print aspect ratio and retain desired print crop in PS
- In LR Print module, size paper to lab aspect ratio and size. Size image with desired crop on the paper and use Print to File

desired print crop in PS nd size. Size image with
