

The logo features a large white '90' on the left. The '0' is a simple circle, while the '9' is a stylized, elongated shape. The '0' and the first 'D' of 'DALLAS' are partially overlaid by a colorful, multi-segmented circular graphic that resembles a camera lens or a film reel. The segments are purple, blue, green, yellow, orange, and red. To the right of this graphic, the word 'DALLAS' is written in a large, white, serif font. Below 'DALLAS', the words 'CAMERA CLUB' are written in a smaller, white, serif font.

# A/V System Components Placement- Room 237

# Audio/Visual Setup Configurations for Northaven Church

- Configuration 1- Yamaha MG06X Mixer & built-in PA Systems in Northaven Church, Rooms 237 & 239
  - Preferred configuration with audio from ceiling mounted speakers in both rooms
  - Audio is sent via 2 cables from the Mixer to the Audio In wall jacks (3.5mm) in each room
    - A thin audio cable (~15 feet in length) with 3.5mm plugs on both ends is connected to the Phones out stereo jack (via an adapter) on the Mixer and to the Audio In jack in Room 237
    - A second thin audio cable (75 feet in length) with a splitter having two ¼" TS (telephone plugs) on one end and a 3.5mm plug on the other.
      - The two ¼" telephone plugs are connected to the primary output jacks (L & R) on the Mixer
      - The 3.5mm plug connects to the Audio In jack in Room 239
    - AThe primary output jacksUse dual audio outputs from Mixer to feed wall mounted Audio IN jacks in Rooms 237 & 239. 75 feet of audio cable required to reach from mixer in Room 237 to Audio IN jack in Room 239.
- Configuration 2- Yamaha SOUNDPAS 300 System (Mixer & Speakers)
  - Backup PA system to the built-in PA Systems in Northaven Church Rooms 327 & 239
  - Also used for DCC meetings at other facilities, such as restaurant where the annual awards banquet is held
  - Mixer equipped with an internal power amplifier to drive the passive speakers

# A/V Cables, Connector Types & Adapters

## Yamaha MG06X Mixer & Northaven PA Systems

# Audio Cable Routing from Room 237 to Room 239

# Northaven PA Systems Setup- Rooms 237 & 239

Keys located  
in Room 230

- Refer to diagram on prior slide with dashed green lines showing routing of audio cable to connect DCC Mixer to wall mounted Audio In jacks in both rooms
- See following slide for photos of A/V Cabinets
- Room 237
  - Unlock A/V cabinet front door
    - Turn ON Master Power in A/V cabinet (top right)
    - Adjust Laptop input volume dial to maximum (lower left)
    - Adjust Output Level (lower right) dial to 90% of maximum
    - Adjust two dials marked Room 239 to minimum
  - Plug in 15 ft. 3.5mm audio cable from DCC Mixer Phones output jack (with ¼" TX to 3/5mm adapter installed) and to Audio In wall jack
  - Plug in two ¼" TS plugs of splitter to DCC Mixer L & R Output jacks
  - Connect 75 ft. 3.5mm cable to 3.5mm female connector on splitter
  - Uncoil 75 ft. audio cable and route along eastern wall (windows) of Room 237 toward Room 239
  - Feed 3.5mm end of audio cable between fixed wall and gasket of partition wall, above baseboard
- Room 239
  - Continue to route audio cable along eastern wall and turn toward A/V cabinet in Room 237
  - Coil excess audio cable and place behind A/V cabinet
  - Plug in 75 ft. 3.5mm audio cable to Audio In wall jack behind A/V cabinet
  - Unlock A/V cabinet front door
    - Turn ON Master Power in A/V cabinet (top right)
    - Adjust Laptop input volume dial to maximum (lower left)
    - Adjust Clipping (lower right) dial to 90% of maximum

AV Cabinet- Room 237

AV Cabinet- Room 239

# Yamaha MG06X Audio Mixer Controls (Top)

# Yamaha MG06X Audio Mixer (Rear)

**NOTE:** Power to mixer is ON whenever 12 VDC Power Supply connected. Power switch on top toggles between ON and STANDBY

# Controls and Functions

## Yamaha MG06X Mixer

### ② [MIC/LINE] mono input jacks (channels 1/L, 2/R)

Connect a microphone, an instrument, or an audio device (CD player, etc.) to the unit. These jacks support both XLR and phone plugs.

### ③ [LINE] stereo input jacks (channels 3/4, 5/6)

Connect line-level devices such as an electric keyboard or an audio device. These jacks support phone plugs. If you use only the [L/MONO] jack, same sound is output from both L (left) and R (right) speakers.

### ④ [PAD] switches

Turning the switch on (▲) will attenuate the sound input to the unit. If you hear distortion or the [PEAK] LED (●) lights, turn the switch on (▲).

**NOTE** Turn the [LEVEL] knob to "0" (minimum) before toggling the [PAD] switch on (▲) and off (■). Otherwise, noise may be produced.

### ⑤ [HPF] (High-Pass Filter) switches

Turning the switch on (▲) will apply a high-pass filter that attenuates frequencies below 80Hz. When speaking into the microphone, you may want to turn this switch on (▲), in order to reduce unwanted vibration and wind sound received by the microphone.

### ⑧ [GAIN] knobs

Determines the basic volume for each channel, 1/L and 2/R. Adjust these so that the corresponding [PEAK] LEDs (●) flash briefly when singing or playing the loudest.

### ⑨ Equalizer (EQ) knobs

Adjust the sound quality by using the [HIGH] (high frequency band) and [LOW] (low frequency band) knobs. If you do not need to adjust the sound quality, set the knob to the "▼" (flat) position.

### ⑩ [FX] switches (MG06X)

Toggle the FX (effect) of channels 1/L and/or 2/R on and off.

### ⑪ [■ MONO / ▲ STEREO] switch

(■) [MONO]: Sound input to channels 1/L or 2/R can be heard from both the right and left speakers. If you use the 1/L or 2/R individually, set the switch to this setting.

(▲) [STEREO]: Sound input to channel 1/L can be heard from only the left speaker, and that input to channel 2/R can be heard from only the right speaker.

### ① (Back panel) DC IN [12V] jack

Connect the supplied AC power adaptor to this jack.

### ⑫ [PEAK] LED

Lights when the volume of input and/or post-equalizer sound is too high. If it is lit, turn the [GAIN] knob (⑧) to the left to lower the volume.

### ⑬ [LEVEL] knobs

For adjusting the volume balance among the channels.

### ⑭ [PHONES LEVEL] knob

Adjusts the headphones volume.

### ⑮ [STEREO LEVEL] knob

Adjusts the overall volume output from the [STEREO OUT] output jacks.

### ⑥ [STEREO OUT] output jacks

Connect a powered speaker or powered amp. These jacks support both XLR and phone plugs.

### ⑦ [PHONES] output jack

Connect a set of headphones. This jack supports a stereo phone plug.

### ⑯ [PHANTOM +48V] switch/LED

When this switch is on (▲), the LED lights indicating that the unit supplies DC+48V phantom power to the XLR plugs of the [MIC/LINE] mono input jacks (②). Turn this switch on when using a phantom-powered condenser microphone.

#### ⚠ CAUTION

Be sure to leave this switch off (■) if you do not need phantom power. Follow the important precautions below, in order to prevent noise and possible damage to external devices as well as the unit when you operate this switch.

- Be sure to leave this switch off when you connect a device that does not support phantom power to channels 1/L or 2/R.
- Do not connect/disconnect a cable to/from channels 1/L and 2/R while this switch is on.
- Turn the [LEVEL] knob of the channels 1/L and 2/R to the minimum before operating this switch.

### ⑰ [⏻] (On/Standby) switch

Toggles to turn the unit's power On (▲) or Standby (■).

#### ⚠ CAUTION

- Rapidly switching the unit between on and standby in succession can cause it to malfunction. After setting the unit to standby, wait for about 5 seconds before turning it on again.
- Even when the switch is in the standby (■) position, electricity is still flowing to the unit. If you do not plan to use the unit for a while, be sure to unplug the AC power adaptor from the outlet.

### ⑱ [REVERB ■ / ▲ DELAY] switch (MG06X)

Toggles to select the effect applied to channels 1/L and 2/R between Reverb (■) and Delay (▲).

### ⑲ Effect select slide switch (MG06X)

Moves up and down to select the effect type. The LED of the selected effect lights.

### ⑳ [FX RTN LEVEL] (effect return level) knob (MG06X)

Adjusts the volume of the effect sound.

### ㉑ Level meter

The L and R meters show the level of the signal output from the [STEREO OUT] jack. If the [PEAK] lamp lights in red, use the [LEVEL] knob to lower the volume.

Power cords and power supplies not shown

# Yamaha SOUNDPAS 300 Mixer Controls

# Yamaha SOUNDPAS 300 Mixer- Controls & Functions

## Controls and Functions

### 1 AC IN jack

Connect the included power cable here.

**Caution** Be sure to use the included power cord. Use of other cords may result in malfunction, heat generation, or fire.

### 2 POWER switch

For turning the power to the mixer on and off.

### 16 LEVEL meter

The LEVEL meter shows the level of the output signal from the SPEAKER L/R jacks.

**Caution** If the LIMITER flashes continuously, the internal power amplifier section is being excessively overloaded and may malfunction. Reduce the output level with the MASTER LEVEL control so that the indicator flashes only briefly on the highest transient peaks.

### 17 POWER indicator

This lights when the POWER switch is ON. When the indicator flashes, the protection circuit is operating. Check that the speaker cable is correctly connected to the mixer and reapply the power.

### 15 MONITOR OUT Control

Determines the signal level output from the MONITOR OUT jack.

**NOTE:** The MASTER LEVEL Control does not affect the signal via the MONITOR OUT Control.

### 14 SPEECH/MUSIC switch

Set this switch to SPEECH (  ) to optimize the mixer settings and sound quality for speech purposes and announcements. Set this to MUSIC (  ) to optimize the mixer for musical performance. The switch lights up in yellow when it is set to MUSIC (  ).

### 3 SPEAKER L/R jacks (for included speakers only)

These output the mixed signal channels from 1 to 7/8, and the level is adjusted with the MASTER LEVEL control. When connecting the included speakers, make sure to turn the power off first. Also, to avoid any possible malfunction, use only the included speakers and the speaker cables included with the device.

### 4 REC OUT L/R jacks

These output the mixed signal channels from 1 to 7/8, and the level is unaffected by the MASTER LEVEL control. You can use these jacks, for example, to connect to an external recorder.

### 5 MONITOR OUT L (MONO) /R jacks

These output the mixed signal channels from 1 to 7/8, and the level is adjusted with the MONITOR OUT control. These jacks are convenient for connecting an external powered speaker for monitoring purposes.

### 6 Channel input jacks (CH 1 to 4)

For connecting a guitar, microphone, keyboard or other instrument/device. For low-level signals (such as that of microphones), set the MIC/LINE switch to the MIC (  ) position. For high-level signals (such as keyboard instruments and audio equipment), set the MIC/LINE switch to the LINE (  ) position.

**NOTE:** On any given channel, you may use either XLR or phone jack, but not both. Please connect to only one of these jacks on each channel.

### 7 Stereo channel input jacks (CH 5/6, 7/8)

Input the left and right channels of a stereo signal into the respective odd and even channels of the mixer. These inputs are intended mainly for use with instruments and equipment having stereo outputs, such as a synthesizer or CD player.

**NOTE:** The channel 5/6 input provides two sets of jacks—both phone jacks and RCA-pin jacks. Either one of these jacks may be used, but not both at the same time. Please connect to only one of these jacks on each channel.

### 8 MIC/LINE switch

Set this switch to MIC or LINE for channels 1 to 4, depending on the level of the input signal. For low-level signals (such as that of microphones), set the switch to the MIC (  ) position. For high-level signals (such as keyboard instruments and audio equipment), set the switch to the LINE (  ) position.

### 9 Equalizer

**HIGH** Determines the level of the high frequency band for each channel. Rotating the knob clockwise boosts the high frequencies and produces a clearer, crisper sound. If you start getting feedback (a high-pitched squealing sound) or you want to make the sound softer and less harsh, turn the knob counterclockwise slightly.

**LOW** Determines the level of the low frequency band for each channel. Rotating the knob clockwise boosts the low frequencies and produces a deeper, warmer sound. If you start getting feedback or you want to make the sound less boomy, turn the knob counterclockwise slightly.

### 10 REVERB switch

Set this switch to ON to recreate the rich ambience of various performance environments, such as a concert hall or a night club. The switch lights up in green when REVERB is ON (  ).

### 11 REVERB control

Determines the overall level of the reverb or echo that is applied to the output signal. For best results, this level should not be set very high, to avoid possible feedback and to prevent the sound from becoming "muddy" with too much reverb.

### 12 LEVEL control

Use these controls to adjust the volume balance among the various channels.

**Caution** To reduce noise, set any LEVEL controls on unused channels to the minimum.

### 13 MASTER LEVEL Control

Determines the volume of the signal output from the SPEAKER L/R jacks. This allows you to adjust the overall volume without changing the relative volume balance among the various channels (made with the LEVEL controls) or the tone settings (made with the Equalizer).

# Troubleshooting

- Check all cable connections- see diagrams on slides 7-8
- Check power is ON to all components
- Verify PA System settings
  - Master Power is ON
  - Gain is set to mid-range

## Issue- No sound

- Start with sound sources and proceed toward PA System mixer and amplifier
- Wired Microphone (connected to Channel 1 of Yamaha Mixer)
  - Verify switch on microphone is ON and plugged in to XLR jack on Channel 1
  - Speak into Mic and observe if output level LEDs flash with varying sound level
  - Verify Pad switch is OFF (UP position)
  - Check Pre-amp levels on Channel 1- start with dial at midpoint
  - Check Channel 1 output level- start with output level dial at midpoint
  - Check Master Level output level- gradually raise output level dial from minimum
  - Connect headphones to Phones stereo output Jack on Yamaha Mixer
  - If sound is heard on headphones proceed to check the PA System mixer and amplifier
  - If sound is heard through the PA System speakers, any other sound issues should be related to the other input devices, e.g., Wireless Mic or Laptop Computer

# Troubleshooting (cont.)

- Issue- No sound
  - The following steps assume satisfactory sound from Wired Mic is heard on PA System speakers
  - If not, return to testing Wired Mic
  - Laptop Computer(connected to Channels 5 and 6 of Yamaha Mixer)
    - Turn OFF Wired and Wireless microphones
    - Verify Computer Sound Control Panel is set to send audio to Headphone jack
    - Verify Computer sound volume set to midpoint or greater
    - Select and play a competition slideshow file (MP4) which has an audio track with music
    - Check Level dial on Channels 5 and 6- start with dial at midpoint
    - Check Master Level output level- gradually raise output level dial from minimum

# Troubleshooting (cont.)

- Issue- No video
  - Verify Computer Display Control Panel set to send video via HDMI port to Optoma Projector
  - On Optoma Projector Keypad Controls select Source and verify HDMI 1 is selected
  - Also verify Computer Display Control Panel set to mirror image on Computer display to Projector
- Issue- Projected image does not fill screen or exceeds edges of screen
  - Adjust Zoom ring on lens of Optoma Projector to adjust size of image
    - Also, the Projector may need to be moved toward or away from screen to achieve proper image size to match screen
  - Play a competition slideshow set to Full Screen on Computer to set size of projected image on screen
- Issue- Edges of projected image are not parallel to the edges of the screen (keystoning)
  - On Optoma Projector Keypad Controls select Keystone Correction and adjust to achieve congruence of projected image to screen

# Backup PA System

- In the event the Northaven PA System is not available, or cannot be made to operate, an alternate, backup PA System is available.
- See slide 14, Configuration 2- DCC owns a a Yamaha Portable PA System, Model: STAGEPAS 300 consisting of:
  - Powered Mixer with 4 mono inputs and 2 stereo inputs
  - 2- 8 inch Speakers (passive)
  - 2- Tripods to support the speakers
- The Yamaha STAGEPAS 300 PA System is also used for meetings held in other venues (e.g., holiday party, awards banquet).
- This PA System is stored in the DCC storage cabinet at Northaven Church
  - Also is the cabinet is a clear plastic storage box with spare audio cables.
- NOTE: The Yamaha MG06X Mixer is NOT compatible with the speakers of the Yamaha STAGEPAS 300 system. It has no power amplifier and will not provide sufficient volume.
- See slide 14 for diagram to setup the Yamaha STAGEPAS 300 system.
